## (54) BROMINATION OF POLYSTYRENE

## (57)Abstract:

PURPOSE: To obtain a brominated polystyrene having low coloring and improved post-reactivity without requiring complicated operations of post handling, by brominating polystyrene in the presence of a double salt consisting of an alkali metal halide, etc. and an iron trihalide.

CONSTITUTION: In brominating polystyrene, a double salt obtained by heating (A) an alkali metal halide and/or an ammonium halide (e.g., ammonium halide, etc.) and (B) an iron trihalide (e.g., anhydrous iron trichloride, etc.) in a dry nitrogen atmosphere until both are melted, followed by cooling and crushing the resultant compound, is used as a catalyst, bromine is dropped to the polystyrene in a solvent, so that is is brominated, to give the desired brominated polystyrene.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the  
examiner's decision of rejection or application  
converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of  
rejection]

[Date of requesting appeal against examiner's

decision of rejection]

[Date of extinction of right]
